

As part of his Certificate II in Engineering Studies, Bailey has been offered a regular work placement at one of our industry partners - Barwon Health.

This team maintains all the medical equipment at University Hospital, the Grace McKellar Centre plus many other regional locations.

On his recent visit Bailey, who has an interest in mechanical engineering, got to meet the manager and the team members and see various examples of medical equipment that they maintain and was shown where his desk will be when he commences his "on the job" work placement this week.

Thanks again to Tung the manager and his team for their ongoing support of our Program.
